

Check-the-COVID-19

A fast and light desktop application that allows you to check the progress of the disease in each country. The main advantage of the application is to be a small data transfer, which will allow it to be used also in countries with weaker Internet infrastructure.

The application works best in Anaconda / Spyder environment (Anaconda 2020.02 for Windows - Python 3.7 version)

Requires the following libraries to be installed:

pip install pandas

pip install matplotlib

pip install Pillow
